BACKUP POWER FOR THE OR – Meet Accreditation Requirements

Medicanix Inc. is pleased to announce the Medi-Products *SILENT SENTRY™ Emergency Backup Power System* which is ideal for use in ambulatory and office based surgery centers that are required to have backup power in their operating rooms.

This new battery-operated system is revolutionary in its low-profile, ultra-compact design. The body is only 14 inches wide and mounts *on or between* wall studs, with as little as 4½ inches protrusion from the wall. It is powerful enough to support surgical equipment, lighting and alarm systems.

The *SILENT SENTRY™* can be ordered as a stand-alone system or hardwired system. It's built in branch circuit breakers eliminate the need for an emergency-circuit subpanel. The system activates instantly and automatically recharges. It is safe and quiet and blends unobtrusively with any décor, using no floor space.

The system includes batteries and ships UPS. It meets accreditation standards economically and is a quiet low cost alternative to a noisy expensive generator.

For more information please visit <http://www.mediproducts.net> or call (203) 324-3711. Free technical advice is offered for power requirements and system sizing.
